**Westermeyer Industries Introduces New High-Pressure Product Line**

--

*Company becomes only supplier with full line of UL/ASME approved products*

BLUFFS, Ill.— The refrigeration and air conditioning industry's shift to high pressure refrigerants has spurred the need for new commercial components that can withstand R410A refrigerant and increased CO<sub>2</sub> levels. For this reason, Westermeyer Industries has expanded its traditional product offerings to include a full lineup of UL and ASME approved high-pressure components.

Westermeyer's high-pressure line includes accumulators, receivers, oil separators, oil regulators, oil reservoirs and oil filters. All have a working pressure of 675 psig.

"Other companies have individual high pressure components, but Westermeyer Industries is now the only company that can say that we manufacture every product according to high pressure standards," said company founder, Gary Westermeyer. "We're always trying to find ways to make life easier on our customers, and now we're able to be a one-stop-shop for their high-pressure product needs."

To learn more about Westermeyer Industries high-pressure product line, visit the company's online catalog at [www.westermeyerind.com/](http://www.westermeyerind.com/) or call 217.754.3277.

Westermeyer Industries designs, manufactures, and distributes high-quality commercial components and accessories for the air conditioning and refrigeration industries. More than just a supplier, the company strives to be a component and accessory problem-solver. This "can-do" attitude permeates all Westermeyer Industries projects and is continually demonstrated through the company's commitment to engineering creativity and design ingenuity.
