**Westermeyer Industries Adds New Online Sizing Calculator
to its Website**

--

New application will bring precision to oil separator and accumulator selection process

BLUFFS, Ill.— Westermeyer Industries recently updated its company Web site and added several features including new product information and an online sizing calculator for oil separators and accumulators used in commercial refrigeration and air conditioning applications.

The calculator asks customers to submit information including refrigerant type, evaporating temperature, condensing temperature, return gas temperature, sub-cooled liquid temperature, discharged super heat and BTU's to obtain precise product sizing information with a few clicks of the mouse. Previously, product selection decisions were based primarily on limited evaporating temperature and condensing temperature specifications found in product catalogs.

“Our company has always tried to find ways to not only improve our products but our customer experience as well,” said Westermeyer Industries founder, Gary Westermeyer. “The new online calculator will aid the system designer and engineer in fine tuning the systems that they’re working on.”

The Westermeyer Industries online sizing calculator can be found at www.westermeyerind.com/.

Westermeyer Industries designs, manufactures, and distributes high-quality commercial components and accessories for the air conditioning and refrigeration industries. More than just a supplier, the company strives to be a component and accessory problem-solver. This "can-do" attitude permeates all Westermeyer Industries projects and is continually demonstrated through the company's commitment to engineering creativity and design ingenuity.
