Westermeyer Industries Adds DX Chillers to Product Line

--

Company continues to expand product offerings to satisfy customer needs

BLUFFS, Ill. (January 20, 2012) — When the refrigeration and air conditioning industry shifted to high pressure refrigerants, Westermeyer Industries (WII) expanded its product offering to become the only company with a full lineup of UL and ASME approved high-pressure commercial components supporting systems employing R-410A and CO₂ refrigerants. Today, WII continues to satisfy customer needs as it has just announced its newest product offering, a new line of DX Chillers.

The DX Chillers range in capacities up to 175 tons. All models incorporate enhanced tubing which maximizes performance and reduces the overall size of the chiller. WII uses an epoxy powder coating for increased corrosion protection on the shell and then insulates the chiller for superior temperature retention. Custom chillers are also available.

“We are constantly looking to improve performance and efficiency thereby providing our customers with superior products,” said company founder, Gary Westermeyer. “The new DX Chillers are a great addition to our product mix.”

To learn more about Westermeyer Industries product offerings, visit the company’s online catalog at www.westermeyerind.com or call 217.754.3277.

Westermeyer Industries designs, manufactures, and distributes high-quality commercial components and accessories for the air conditioning and refrigeration industries. More than just a supplier, the company strives to be a component and accessory problem-solver. This "can-do" attitude permeates all Westermeyer Industries projects and is continually demonstrated through the company’s commitment to engineering creativity and design ingenuity.
