

INSTRUCTION SHEET

'TST' Series Serviceable Oil Strainer For Transcritical CO₂

INTRODUCTION

Specifications

- Maximum Working Pressure: 2031 PSI
- Nickel-Plated Steel Construction
- 1/4" FNPT inlet & outlet
- 100 Mesh Stainless Steel Strainer Basket
- 5.51 sq. in. filtering surface area
- Hermetically-Sealed Integrated Sight Glass
- Suitable for all refrigerants and oil types

Items Needs

- Evacuation pump
- 2" Socket and Wrench
- Adjustable Wrench
- Gasket Scraper
- Service Kit model 90-026TK
 - 90-026 replacement strainer Basket
 - Replacement PTFE gasket 100-024
 - Replacement spring 130-007A

Warning

Improper installation or misuse of this product may cause serious personal injury or damage to equipment and property.

THESE INSTRUCTIONS ARE PREPARED TO ASSIST QUALIFIED PERSONNEL TO SERVICE PRESSURE VESSEL EQUIPMENT. CONSUMERS ARE NOT QUALIFIED TO PERFORM THE INSTALLATION DESCRIBED BELOW.

INSTRUCTIONS

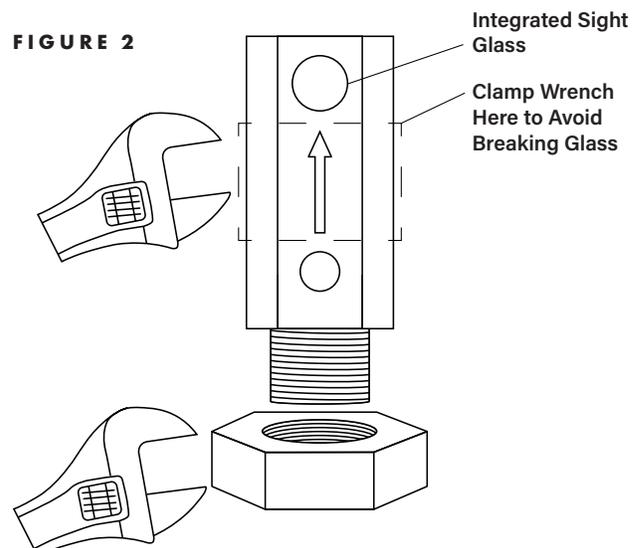

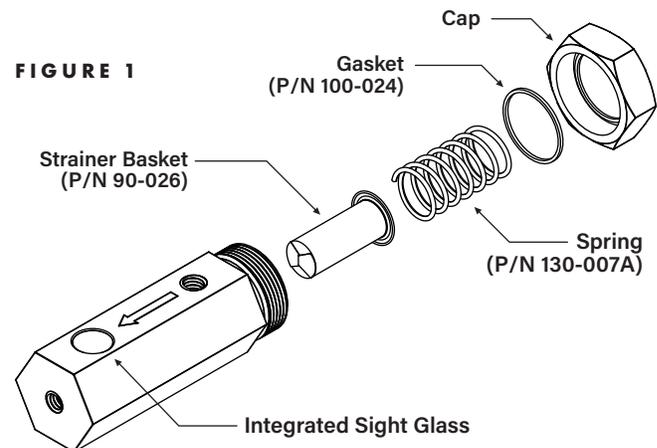

Preparation

1. Isolate the oil strainer from the system.
2. Evacuate all refrigerant.
3. Locate access fittings to assist with evacuation to ensure there is no internal pressure on the oil strainer.

Service / Replacement

1. Securing the strainer body with adjustable wrench, remove 1-3/4" seal cap with 2" wrench. (See Figure 2)
2. Remove strainer basket by pulling straight out. **Service clearance required: 2"**
3. Inspect inside of strainer body. Use a rag to wipe away any residual debris.

4. Install new strainer basket, ensuring it is fully seated.
5. Remove old PTFE gasket from the groove in the strainer body surrounding the rotolock thread. Replace with gasket included in service kit.
6. Ensure spring is properly seated in housing.
7. Confirm that arrow is oriented correctly in direction of oil flow
8. Securing the strainer body with adjustable wrench, reinstall the seal cap using 2" socket and torque to 65 ft-lbs
9. Evacuate all air from oil strainer.
10. Open valves (if applicable) and turn the system back on.
11. Check for leaks.
