PRODUCT W4300-38F Oil Float Assembly

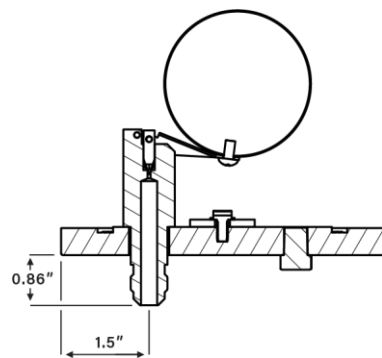

A design change has been implemented for Westermeyer Industries **W4300-38F** oil float assembly. Featuring Westermeyer's new "unibody" oil float construction, this design combines several components in the oil flow path into a single machined part, increasing manufacturing efficiency and reducing product complexity.

This updated oil float is factory installed for all Westermeyer Industries oil separators featuring a serviceable oil float chamber and is also available as a replacement part.
